

25.03.2013 Our company has figured elements of granite paving in stock.

Figured paving elements (FEM) of granite is quite a new trend in the field of materials of granite, which allows you to more fully realize the desire for aesthetics surrounding area near the house, and not only. In addition, for many years, granite is considered one of the most durable on the wear resistance of the material, he is not afraid of no heat, no cold, no sun. Large selection of colors of granite (black, gray, red, pink, green, dark blue) allows to come up with different patterns and shapes with curved laying paving elements of granite. Figured elements of granite paving (FEM) can have three types of surface treatment: polishing, which gives the stone a glossy sheen; buchardirovanie and heat treatment fully perform the function of slip resistance, which is important in our climate.

Large selection of granite in different colors, elements in the form of a cell and a diamond.

Figured paving elements of granite have a high level of wear resistance and decoration. Different forms of the elements and a range of natural granite colors can create interesting patterns and designs.
